The material master contain information on all the materials that a company procures, produces, stores, and sells. It is a number uniquely identifies a material master record, and hence a material. Materials with the same basic attributes are grouped together and assigned to a material type such as finished, raw material, etc.

Deformation (engineering) In materials science, deformation refers to any changes in the shape or size of an object due to an applied force (the deformation energy in this case is transferred through work) or; a change in temperature (the deformation energy in this case is transferred through heat). The first case can be a result of tensile (pulling) forces, compressive (pushing) forces, shear ...

Internal quantum efficiency (IQE) (η_i) is defined as the ratio of the number of electron-hole (e-h) pairs or charge carriers generated to the number of photons absorbed, within the active layer(s) of the device. It is also called the quantum yield and accounts for the recombination loss. Typically, for a superior quality material with low dislocation density and defects, IQE could be close to ...

Herein we discuss band gap modification of MIL-125, a TiO₂/1,4-benzenedicarboxylate (bdc) metal-organic framework (MOF). Through a combination of synthesis and computation, we elucidated the electronic structure of MIL-125 with aminated linkers. The band gap decrease observed when the monoaminated bdc-NH₂ linker was used arises from donation of the N 2p electrons to the aromatic linking unit ...
